

Do you want to create your own offline, online or metaverse casino? do you want to create some arcade consoles there and create some mini games for them for your users to play? do you want some baccarat or poker tables? Or maybe you need a bar for your casino. For all them **“Casino Happy”** 3d game collection will help you.

Casino Happy is a 3d collection asset for creating your own casino. No matter if you are creating a game casino for your offline game or online game like metaverse ones, you can use the “Casino Happy” collection as all the models created lowpoly and optimized. Some of the model has two LOD and some models doesn't have LOD because they needn't also as a prize we created a fries shop near the casino and you can use this model in your game too.

Note : For Achieving a scene like in the product video you should import post process from package manager and add lights and reflection probes in the demo scene.

Tip and Trick:

You can have some changes on some models like boards by importing the model fbx in a software like substance painter and import it's textures and add your own changes on the model and export your new textures. Also you can do your changes in photoshop but using a 3d painting software like substance painter is recommended.
